

Future Improvements

- Multi-detector arrangement: area 1km overlap

Manually masking
of the area

Area not processed

- Clouds, cloud shadows and water artifacts

Manually masking of the area

Area not processed

Automatic cloud/cloud shadow/water artifacts detection (ARGANS: SEOM Project, published under Ngoc et al., 2019)

- Image processing: Atmospheric Correction

Band 4

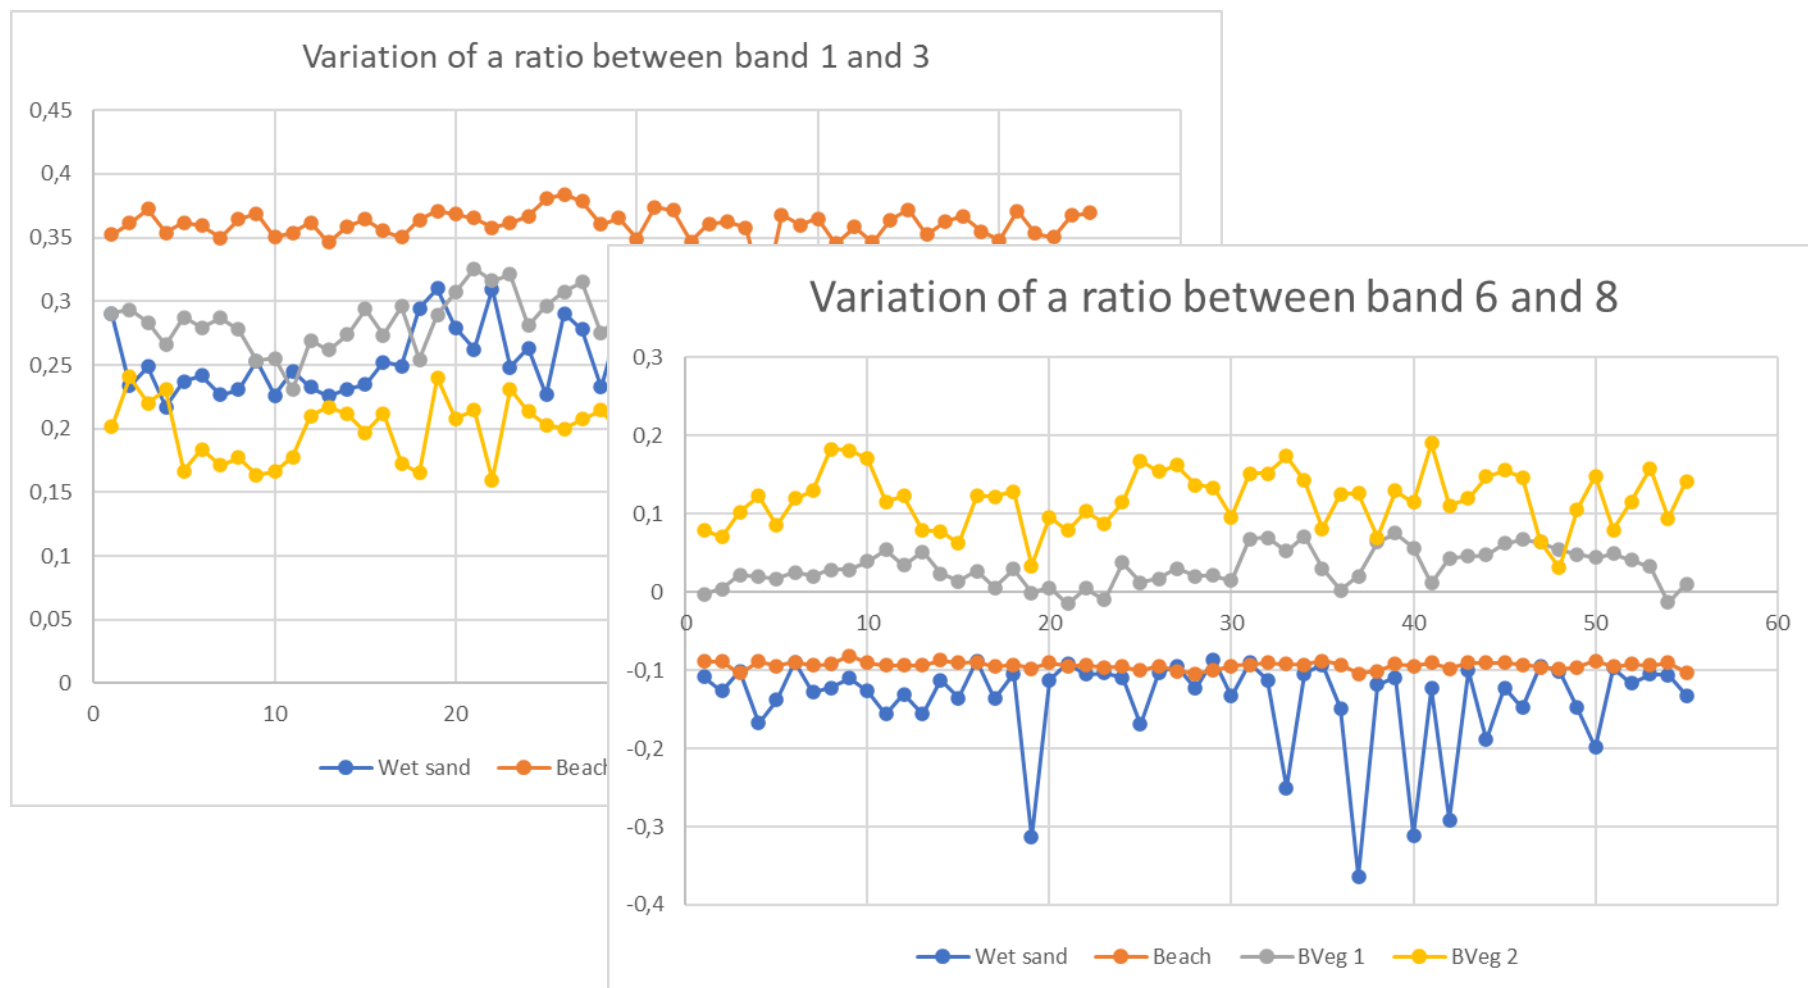

New AC software chains, such **Sen2Cor** on land and **MeetC2** on open waters : **interpolation** between them for coastal areas

- Resolution of “jigsaw” pattern

- Resolution of “jigsaw” pattern

WV3 bands		S2 bands
1	400-452 nm (Coastal B)	1
2	448-510 nm (Blue)	2
3	518-586 nm (Green)	3
4	590-630 nm (Yellow)	
5	632-692 nm (Red)	4
6	702-746 nm (Red-Edge)	5/6
7	772-890 nm (NIR 1)	8
8	866-954 nm (NIR 2)	8A

- Resolution of gaps in waterline

- Improvement of waterline to shoreline transformation

- Improvement of waterline to shoreline transformation

- Improvement of data selection

Global cloud cover selection VS Cloud cover over an AOI

- **Next steps**

Temporal study/ analysis of the products
